

Trend Micro™

# Hosted Email Encryption

Reduce the risk of non-compliance

It doesn't matter what line of business you're in. Any organization with an executive management, human resources, or legal department must exchange sensitive information over the Internet at some point or another, making it imperative that a messaging security system be put into place. While encryption is a proven method for protecting enterprise communications, finding the right encryption solution—particularly one without heavy administration—can pose a challenge.

**Trend Micro™ Hosted Email Encryption** is an add-on service that integrates seamlessly with the content filtering capabilities of Trend Micro™ Hosted Email Security. When used together, they provide a comprehensive security strategy, offering policy enforcement, content management, anti-malware and anti-spam protection in a single, easy-to-manage solution. Built with Trend Micro™ PrivatePost™ technology, this hosted key management service helps ensure availability of encryption keys 24x7, minimizing time spent on administration. Since policy-based encryption automatically secures confidential emails without end-user intervention, administrators no longer need to rely on individuals to encrypt sensitive data. That's why Trend Micro Hosted Email Encryption is the easiest way for Hosted Email Security customers to achieve compliance.

## KEY FEATURES

### Automatic Encryption

- Appears as a content filtering rule action in Hosted Email Security—simply check a box to apply
- Identifies content by attachment characteristics, keywords, lexicons, and customized data rules
- Helps ensure regulatory compliance and safeguard privacy

### Advanced Protocols

- Encrypts both email and attachments
- Decrypts via web browser for those without client software installed
- Allows secure delivery to any recipient without additional hardware or software

### Hosted Key Management

- Accelerates deployment, lowers up-front costs, and reduces system complexity
- Lifts IT burden, decreasing time spent on key management and privacy issues
- Eliminates the need for pre-enrollment

### Effortless Key Creation and Recovery

- Creates encryption keys with just a recipient's email address
- Offers password and key recovery with no IT intervention
- Ensures worldwide availability of encryption keys 24x7

## HOSTED SERVICE

### Protection Points

- Messaging Gateway
- In the cloud

### Threat Protection

- Compliance
- Privacy
- Data Protection
- Securing Intellectual Property

## KEY BENEFITS

- Protects sensitive and confidential data
- Enforces policies for regulatory compliance
- Enables increased trust among partners and customers
- Saves time and money with hosted deployment and key management
- Simplifies use, facilitating adoption and improving productivity

Hosted Email Encryption uses Trend Micro Hosted Email Security content filtering rules and hosted key management to easily and automatically deliver email data protection.

**Recipient Experience:** Encrypted email is received in a sealed envelope. Recipients can download their own copy of Trend Micro™ Encryption for Email Client or use the web-based Zero Download Reader to read and reply without the need to install any software on desktops or smart phones

**Trend Micro Hosted Email Encryption** seamlessly integrates with the content filtering capabilities of Hosted Email Security. This hosted service provides:

- Antispam
- Antivirus
- Antispyware
- Antiphishing
- Content Filtering
