

Trend Micro™

INSTANT-ON CLOUD SECURITY FOR MICROSOFT AZURE

Security designed to be as agile as the cloud

Around the world, organizations like yours are embracing the economic and operational benefits of cloud computing. Whether you are extending internal resources or fully deploying on Microsoft Azure, you'll need to start thinking about security in a new way—a way that helps you take full advantage of the business benefits of the cloud.

Azure delivers a trusted cloud infrastructure on which customers can design, build and manage their own cloud applications and infrastructure. While Azure provides security controls for the infrastructure and change to virtualization layers, you'll be responsible for deploying and maintaining security for the guest operating systems, applications, and data in order to protect against malware attacks, zero-day vulnerabilities, and data breaches.

Trend Micro has what it takes to enable organizations like yours to safely realize the potential of cloud computing. We focused on innovating and delivering highly optimized security solutions for Microsoft Azure Cloud Services. We understand why you need to approach cloud security differently than traditional security. So we don't force you to choose between business agility and securing your most valuable assets.

COMPREHENSIVE SECURITY DESIGNED TO AUTOMATICALLY PROTECT YOUR APPLICATIONS AND DATA

Detect and protect against intrusions

Defend against hackers who can easily exploit vulnerabilities like Shellshock and Heartbleed to gain access to sensitive information. Immediately protect your instances from these and new serious vulnerabilities with intrusion detection and prevention (IDS/IPS).

Uncover suspicious changes

Get alerts when unplanned or malicious changes are made to your systems. Suspicious events are immediately highlighted in the centralized console so you can evaluate and determine right away if there is a real threat—without sorting through thousands of logs

Speed PCI-DSS compliance

Accelerate compliance by meeting multiple PCI requirements with a single product, including intrusion detection and prevention, file integrity monitoring, and log inspection.

Keep malware off workloads

Protect your Windows and Linux workloads from increasingly complex malware. Powered by the Trend Micro™ Smart Protection Network™ and consistently rated the best performing antivirus solution by AV-TEST*, our solutions help you instantly identify and remove malware and blacklist domains known to be command and control servers.

Stop application attacks

Block SQL injection attacks, which are used in 80% of web application data breaches. Instantly protect your web servers with IPS rules that block XSS or SQL attacks and other serious vulnerabilities until you can patch systems.

Microsoft Azure

Why Trend Micro and Microsoft Azure?

Trend Micro, a global leader in cloud security, delivers flexible, proven solutions for Azure:

- Architected to provide flexible, scalable protection for Microsoft Azure applications and data
- Automatic processes detect new instances and rapidly protect them, ensuring constant protection even when scaling
- Built to the highest government standards, including common criteria EAL 4+
- Reduced security management costs by having multiple security capabilities in a single product to improve security visibility and lower effort to support audits

If you're leveraging Microsoft Azure to gain the benefit of cloud characteristics like dynamic, flexible and scalable, shouldn't your security solutions have this too?

“The main point when it comes to security products is whether they can swiftly implement measures to minimize the damage from attacks. And from that perspective we chose Deep Security, and it hasn't let us down.”

Eisuke Sakuhara

Enterprise Cloud Unit,
General Manager, FIXER inc.

DESIGNED TO PROVIDE AUTOMATED AND HIGHLY SCALABLE SECURITY

TREND MICRO™ DEEP SECURITY™ secures more servers globally than any other solution and specializes in protection for cloud and virtualized workloads. It provides comprehensive, flexible security for Azure workloads in a single product, so you can build new applications or move existing resources to the cloud with confidence.

Deep Security protects workloads by:

- Defending against network threats with intrusion detection and prevention (IDS/IPS)
- Immediately protecting against vulnerabilities like Shellshock and Heartbleed
- Keeping malware off Windows and Linux workloads
- Alerting when unplanned or suspicious changes are made to systems
- Stopping SQL injection and XSS attacks on applications

Solutions built to meet and exceed government security certification requirements like common criteria EAL 4+. Robust cloud security capabilities can also be used to help comply with industry regulations like PCI and HIPAA.

OPTIMIZED FOR AZURE

Trend Micro's security solutions are optimized for Microsoft Azure Cloud Services, including supporting the use of Microsoft PowerShell scripting to streamline provisioning of security for Windows Azure virtual machines and SharePoint workloads. Organizations can also leverage leading management tools for Azure, including Chef, Puppet, and RightScale to automate security control deployment.

About Trend Micro

As a global leader in cloud security, Trend Micro develops security solutions that make the world safe for businesses and consumers to exchange digital information. With more than 25 years of experience, Trend Micro delivers top-ranked security that fits customers' needs, stops new threats faster, and protects data in physical, virtualized, and cloud environments.
