

Trend Micro™

# COMPLETE USER PROTECTION

Protect Your Users with the Broadest Range of Email and Collaboration Security

## INTRODUCTION

Let's face it. Email is still the number one way that attackers enter your organization. According to TrendLabs research, over 90% of targeted attacks start with an email. So if your current messaging security is outdated, it may be leaving out the welcome mat for attackers. You'll have to rely on your users to protect your information. And they often need protection from themselves.

Unfortunately, your users can be fooled by phishing emails, which trick them into opening an attachment or clicking on a link that infects their device. The same goes for outbound emails, where employees can include the wrong attachment and accidentally expose sensitive data resulting in a compliance nightmare. You need interconnected email and collaboration security that blocks the "bad stuff" from coming in and keeps the "good stuff" from going out unprotected.

It's not all that easy, even in a standard on-premise environment. But if you are like most organizations, you're moving much of your business to the cloud now. And even more in the future. Is your security ready? Whether you are moving to a hosted email system, virtualizing your gateway, or moving your email server to Microsoft Azure or Amazon Web Services, you need a vendor who can support you with complete visibility across all communications and all deployment models. It's time to start thinking about how email and collaboration security can help you provide complete user protection.

## PROTECT YOUR USERS WITH LEADING EMAIL AND COLLABORATION SECURITY

Trend Micro email and collaboration security products provide superior protection against spam, phishing, malware, and targeted attacks. Built on the industry's most effective antispam engine, our messaging security solutions consistently stop more spam and phishing—as validated by independent tests. Opus1 consistently names Trend Micro #1 in antispam. And NSS Labs found us #1 in phishing protection. Trend Micro email and collaboration security solutions simplify compliance by using DLP templates and policy-based email encryption. Central management gives you visibility across products for threat and data protection. And our security deploys in the way that best protects your particular business, whether you need SaaS, hybrid, virtual, or mail server form factors to fit your unique environment.

## SUPERIOR PROTECTION AGAINST PHISHING ATTACKS AND ADVANCED MALWARE

Trend Micro provides comprehensive protection against all types of messaging threats. Trend Micro email security products use the latest techniques to detect phishing and malware. The Trend Micro™ Smart Protection Network™ provides global threat intelligence. This massive data mining framework correlates more threats using big data analysis and a vast army of threat sensors. So you get global and local, real-time threat intelligence correlated across a global network. These real-time updates use reputation based filtering as a first step to block spam, phishing, and malicious URLs before they enter your business.

### Trend Micro Email and Collaboration Security Solutions

- **Trend Micro™ InterScan™ Messaging Security Virtual Appliance**—Email gateway security deployed as virtual appliance or software
- **Trend Micro™ InterScan™ Messaging Security Suite**—Email gateway security deployed as software on Linux or Windows servers
- **Trend Micro™ ScanMail™ Suite for Microsoft Exchange**—Mail server security deployed on Microsoft Exchange
- **Trend Micro™ ScanMail™ Suite for IBM Domino**—Mail server security deployed on Domino
- **Trend Micro™ Hosted Email Security**—Email gateway security deployed as a service
- **Trend Micro™ IM Security for Microsoft Lync**—Instant messaging security deployed on Lync servers
- **Trend Micro™ PortalProtect™ for Microsoft SharePoint**—Collaboration security deployed on SharePoint servers

## SUPERIOR PROTECTION AGAINST PHISHING ATTACKS AND ADVANCED MALWARE (cont.)

We also protect you against data breaches and infections from spear phishing and advanced malware. Trend Micro email and collaboration security solutions easily expand to add custom sandbox analysis that detects malware within your own unique environment. Our optional sandboxing opens attachments in a secure environment to monitor behavior. And document exploit detection finds malware hidden in PDF and other benign looking documents. Together these techniques provide the best protection against email attacks.

## SIMPLIFIED COMPLIANCE WITH DLP, EMAIL ENCRYPTION, AND CENTRALIZED MANAGEMENT

No matter how well you are protected, your employees can make mistakes and inadvertently send or post sensitive data. Trend Micro email and collaboration security solutions help you overcome most of these compliance challenges. Our pre-made DLP templates and policy-based email encryption make it simple to turn on data protection. Better yet, once it's live, you can centrally monitor DLP violations with Trend Micro Control Manager™. So you have complete visibility across web, endpoint, and email security. That means you'll spend less time administering security policies.

Saving time is good. Because managing multiple security products across multiple locations can be difficult. And it's costly—multiple studies show that security management is the highest cost factor. Now you can simplify your management by administering day-to-day operations centrally from Trend Micro Control Manager. Central management reduces the time spent on security. And customizable dashboards and role-based access put the information you need at your fingertips. So you can centrally manage spam and malware detection within Trend Micro gateway and mail server security solutions. But you can also centrally manage DLP in addition to threat prevention. And you can manage all layers of security from a single console, whether that security is hosted, on-premise, or both.

## DEPLOYMENT OPTIONS TO FIT YOUR EXACT ENVIRONMENT

IT models are rapidly evolving; what is on-premise today, may be in the cloud tomorrow. Surprisingly, it's difficult to find security that can seamlessly evolve throughout this process. So you're forced to choose between on-premise and cloud-based security. Even worse, you may be forced to pay for both separately. When, in reality, you need to be able to choose the best mix of both to maintain maximum responsiveness to the dynamic needs of your business.

To deploy security that is optimized for the environment with a vendor you trust, look no farther than Trend Micro. We offer the largest product breadth of any vendor for email and collaboration. Plus, we let you easily mix or switch between cloud, on-premise, or hybrid security form factors, when you purchase your email and collaboration security as part of the **Smart Protection Complete Suite**. But you won't sacrifice visibility or control across deployment models. User-centric management gives you insight into all of a user's activities across different threat vectors and into both cloud and on-premise environments.

## FOCUS ON KEY ENTRY POINTS TO STOP SPAM AND ADVANCED ATTACKS

With the explosion of attacks that are targeting your business through email, you need to protect all of your users' communications against sophisticated attackers. With Trend Micro email and collaboration security, you get better protection against today's evolving threats, deeper compliance with central management, and a flexible approach to leveraging the cloud for security.

Deploying Trend Micro email and collaboration security as part of Trend Micro Complete User Protection, you experience exponential gains in protection as all layers of security work together and are managed together to better correlate threat data and give visibility to a threat. At the end of the day, we'll help you stop more threats, more often.
