President & Representative Director,
CEO of Trend Micro Group & Co-founder

Compounding Security Debt

- Like financial debt – security debt compounds
- Every security exposure and misconfiguration we find but don't fix is added to the principal
- Every new discovery is interest

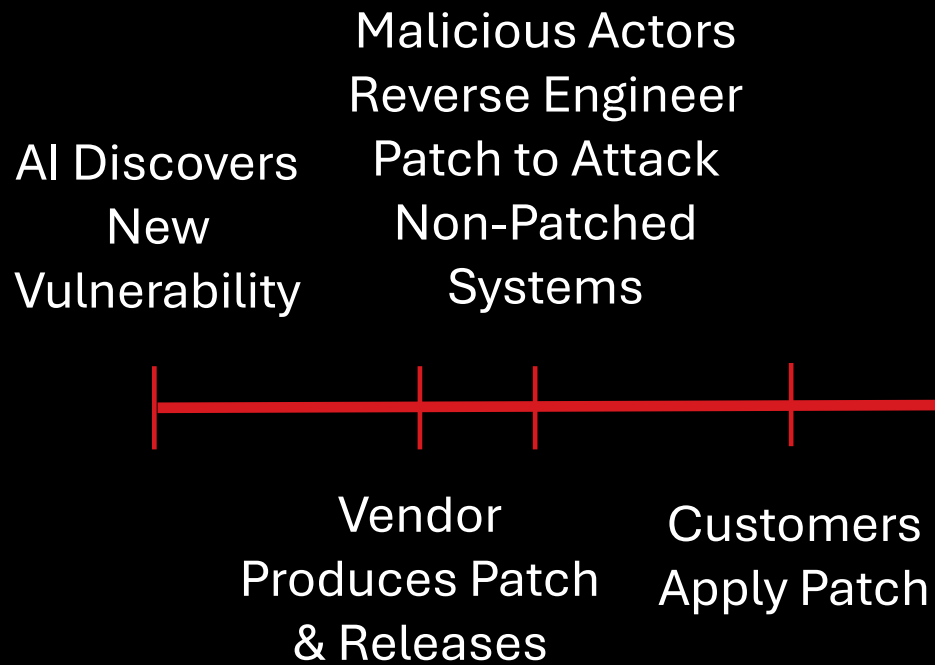

“

The security industry needs to fix compounding risk.

We find more than we fix and that's not sustainable.

”

The Dangers of Vulnerabilities

The Vulnerability That Never Ends: Log4j

1. **Still massive** — Tens of millions of systems remain exposed, with ~12% of Java applications still running vulnerable versions.
2. **Painful to fix** — Log4j hides deep in software dependencies, and upgrading often breaks applications — making patches a months-long ordeal.
3. **Moving target** — Three new vulnerabilities have surfaced in just the past few months, so “patched” systems can quickly become vulnerable again.

Human & Organization Vulnerabilities

Incident	Vulnerability Type	Specific Vulnerability	Zero Day
Equifax Data Breach (2017)	Remote Code Execution	Apache Struts CVE-2017-5638	No
Target Data Breach (2013)	Network / POS Weakness	Vendor access + legacy system vulnerabilities	No
Marriott Starwood Breach (2018)	Unpatched Systems	Internal application + database weaknesses	No
Capital One Breach (2019)	Cloud Misconfiguration	SSRF + misconfigured AWS WAF	No
Colonial Pipeline Attack (2021)	Identity / Access	VPN account without MFA	No
T-Mobile Data Breach (2021)	API / Exposure	Exposed API and misconfigured infrastructure	No
Experian South Africa Breach (2020)	Authentication Weakness	Weak access controls / verification failure	No
Uber Breach (2022)	Identity / Social Engineering	MFA fatigue attack	No
MOVEit Transfer Breach (2023 - post-patch victims)	SQL Injection	CVE-2023-34362	No
Fortinet VPN Breaches (2018-2023 exploitation)	Network Appliance Vulnerability	CVE-2018-13379 (SSL VPN credential leak)	No

TrendAI spark event!

AI security , is the essential part of AI ecosystem!!
