

Infrastructure-as-code template scanning – Embed into your CI/CD pipeline

PROACTIVE PREVENTION AND AUTOMATION

In addition to providing real-time configuration monitoring and auto-remediation for your cloud environments, you'll quickly realize the value of shifting security and compliance to the earliest phase of your CI/CD pipeline. With our template scanning capabilities, customers can run their AWS CloudFormation and Terraform through the Conformity API during the coding process. This will enable automated, proactive prevention of vulnerabilities and gives you peace of mind that the code moving into your cloud infrastructure is fully compliant.

Whether your cloud exploration is just taking shape, you're midway through a migration, or you're already running complex workloads in the cloud, Conformity can help. This solution offers full visibility of your cloud infrastructure and provides continuous cloud security and compliance posture management based on the AWS Well-Architected Framework. Let us do the heavy lifting so you can focus on innovating.

TRY IT IN YOUR ENVIRONMENT TODAY!
