The data center is undergoing a tremendous transformation. Organizations are now moving their server workloads to the cloud, and even leveraging containers and serverless in their cloud-native application architectures. There are many advantages of hybrid cloud computing, however, it also comes with new risks and threats. Your organization must ensure compliance requirements are met, and that you have unified security across all of your workloads such as physical servers, virtual, cloud, or container.

Trend Micro Cloud One™ - Workload Security provides comprehensive detection and protection in a single solution that is purpose-built for server, cloud, and container environments. Workload Security allows for consistent security, regardless of the workload. It also provides a rich set of application programming interfaces (APIs), so security can be automated and won’t impact your teams.

AUTOMATED
Security as code lets your DevOps teams bake security into their build pipeline to release continuously and frequently. With built-in automation, including automated discovery and deployment, quick-start templates, and our Automation Center, secure your environment and meet compliance requirements quickly.

FLEXIBLE
Builder’s choice. Security for your hybrid cloud, multi-cloud, and multi-service environments, as well as protection for any vintage of application delivery—all with broad platform support.

ALL-IN-ONE SOLUTION
Unified detection and protection capabilities in one platform, with the breadth, depth, and innovation required to meet your cloud security needs today and in the future.

Key Business Issues

✔️ Automated protection
Save time and resources with automated security policies across your hybrid environments, such as data center and cloud, as you migrate or create new workloads.

✔️ Unified security
Deploy and consolidate detection and protection across your physical, virtual, multi-cloud, and container environments with a single agent.

✔️ Security for the CI/CD pipeline
API-first, developer-friendly tools to help you ensure that security controls are baked into DevOps processes.

✔️ Accelerated compliance
Demonstrate compliance with a number of regulatory requirements, including GDPR, PCI DSS, HIPAA, NIST, FedRAMP, and more.
TRUSTED HYBRID CLOUD SECURITY

Full Life Cycle Container Security

Workload Security delivers advanced runtime protection for containers. Layered security defends against attacks on the host, container platform (Docker), orchestrator (Kubernetes), containers themselves, and even containerized applications. Designed with a rich set of APIs, Workload Security allows IT Security to protect containers with automated processes for critical security controls.

DevOps can leverage security as code by baking security into the application development pipeline, reducing the friction that comes with applying security in rapidly changing and evolving infrastructures. Complementing container runtime security, Trend Micro Cloud One™ – Container Security looks for vulnerabilities, malware, secrets, and compliance in your build pipeline.

Automated Cloud Security

Workload Security works seamlessly to secure dynamic jobs in the cloud, with automated discovery of workloads across cloud providers, such as AWS, Microsoft Azure™, and Google Cloud Platform™.

The single management console enables unified visibility over all of your workloads and automated protection across a multi-cloud environment with consistent, context-aware policies. Deployment scripts and RESTful APIs enable integrated security with your existing toolset for automated security deployment, policy management, health checks, compliance reporting, and more.

Virtualization and Datacenter Security

Workload Security brings advanced protection to physical and virtual servers, enabling easy deployment and management of security across multiple environments through automatic policy management. Workload Security protects virtual desktops and servers against zero-day malware, including ransomware, cryptocurrency mining attacks, and network-based attacks, while minimizing operational impact from resource inefficiencies and emergency patching.
Security fueled by leading global threat research

Our 15 global research centers and more than 10,000 independent researchers internationally have visibility into the entire global threat landscape. With teams dedicated to cloud and cloud-native applications, we use our wealth of knowledge to strengthen our products and protect against current and future threats.

Scope

We continually analyze and identify new malware, ransomware, malicious URLs, command and control (C&C) locations, and domains that could be used in attacks. Thanks to the Trend Micro™ Zero Day Initiative™, the market leader in vulnerability disclosure, we can identify and responsibly disclose new vulnerabilities while helping our solutions discover threats sooner across a wide range of applications and platforms.

KEY ADVANTAGES

Advanced Threat Protection

- Advanced security controls such as an intrusion prevention system (IPS), integrity monitoring, machine learning, and application control.
- Detect and block threats in real time, with minimal performance impact.
- Multi-platform application control to detect and block unauthorized software execution.
- Shield known and unknown vulnerabilities in web, enterprise applications, and operating systems through an IPS.
- Send alerts and trigger proactive prevention upon the detection of suspicious or malicious activity.

- Secure end-of-support systems with virtual patches delivered through an IPS, ensuring legacy systems stay protected from existing and future threats.
- Track website credibility and protect users from infected sites with web reputation threat intelligence from Trend Micro’s global domain-reputation database.
- Identify and block botnet and targeted attack C&C communications.
- Market-leading threat research and threat intelligence from Trend Micro™ Smart Protection Network™ enables better security against the latest threats.
Unified Security for the Hybrid Cloud

- Cloud and datacenter connectors automatically discover workloads running in your hybrid cloud environments for full visibility and automated policy management.
- Eliminate the cost of deploying multiple point solutions and achieve consistent security across physical, virtualized, cloud, and container environments with a lightweight, single agent and management console.
- Enforce security early in the pipeline using advanced build-time image and registry scanning from Container Security, complementing the runtime capabilities of Workload Security for protection across the container life cycle.
- Ensure security at multiple layers of your container environments, including protection for the host, container platform (Docker) and orchestrator (Kubernetes), the containers themselves, as well as the containerized applications.
  - Secure your container host with the same advanced host-based controls applied across your physical, virtual machine (VM), and cloud workloads.
  - Monitor for changes and attacks on Docker and Kubernetes platforms with integrity monitoring and log inspection capabilities.
  - Protect runtime containers through container vulnerability shielding (via IPS), real-time malware protection, and east-west container traffic inspection.

Achieve Cost-Effective Compliance

- Address major compliance requirements for the GDPR, PCI DSS, HIPAA, NIST, and more, with one integrated and cost-effective solution.
- Provide detailed audit reports that document prevented attacks and compliance policy status.
- Reduce the preparation time and effort required to support audits.
- Support internal compliance initiatives to increase visibility of internal network activity.
- Help consolidate tools for meeting compliance requirements with enhanced file-integrity monitoring capabilities.
### DETECTION AND PROTECTION CAPABILITIES

<table>
<thead>
<tr>
<th>Network security tools detect and stop network attacks and protect vulnerable applications and servers</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Host-Based Intrusion Prevention:</strong> Detects and blocks network-based exploits of known vulnerabilities in popular applications and operating systems using IPS rules.</td>
</tr>
<tr>
<td><strong>Firewall:</strong> Host-based firewall protects endpoints on the network using stateful inspection.</td>
</tr>
<tr>
<td><strong>Vulnerability Scanning:</strong> Performs a scan for known network-based vulnerabilities in the operating system and applications.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>System security tools lockdown systems and detect suspicious activity</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Application Control:</strong> Blocks any executables and scripts that aren’t identified as known-good applications or DLLs from installing/executing.</td>
</tr>
<tr>
<td><strong>Log Inspection:</strong> Identifies and alerts unplanned changes, intrusions, or advanced malware attacks, including ransomware as it is happening on your systems.</td>
</tr>
<tr>
<td><strong>File-Integrity Monitoring:</strong> Monitors files, libraries and services, and etc. for changes. To monitor a secure configuration, a baseline is created that represents the secure configuration. When changes from this desired state are detected, details are logged and alerts can be issued to stakeholders.</td>
</tr>
</tbody>
</table>

<tr>
<th>Malware prevention stops malware and targeted attacks</th>
</tr>
</thead>
</table>
| **Anti-Malware:**
  i. File Reputation— blocks known-bad files using our anti-malware signatures.
  ii. Variant Protection— looks for obscure, polymorphic, or variants of malware by using fragments of previously seen malware and detection algorithms. |
| **Behavioral Analysis:** Examines an unknown item as it loads and looks for suspicious behavior in the operating system, applications, and scripts, as well as how they interact, in order to block them. |
| **Machine Learning:** Analyzes unknown files and zero-day threats using machine learning algorithms to determine if the file is malicious. |
| **Web Reputation:** Blocks known bad URLs and websites. |
| **SAP Scanner:** Enables anti-malware scanning for Netweaver through the SAP Virus Scan Interface (VSI) |

*The SAP Scanner requires specialized functionality that must be purchased separately from your Workload Security license.*
BUILT FOR SECURITY IN THE CLOUD

Workload Security is optimized for leading cloud providers’ infrastructures, including support for many operating systems, examples include:

- Linux
- Windows
- SUSE
- RedHat
- CentOS
- Ubuntu

Compatibility with configuration, event, and orchestration tools:

- Chef
- Puppet
- OpsWorks
- SaltStack
- Splunk
- SumoLogic
- Ansible
- SWIMLANE
- NOW
- DEMISTO

CERTIFICATION FOR CLOUD SERVICE PROVIDERS (CSPs)

Our CSP partner program is a global validation program designed for CSPs to prove interoperability with industry-leading cloud security solutions from Trend Micro.

ARCHITECTURE AND SUPPORTED PLATFORMS

Workload Security is software as a service (SaaS) hosted by Trend Micro in the cloud, which means additional value from new capabilities and security functionality are delivered continuously. We manage regular product and kernel updates, set up and maintain the security database, and administer the management platform. Our cloud-based security offering enables quick set up, as well as automates and simplifies security operations for cloud instances.

Workload Security Agent enforces the platform’s detection and protection policy (application control, anti-malware, IPS, firewall, integrity monitoring, and log inspection) via a small software component deployed on the server or VM being protected. This can be automatically deployed with leading operational management tools like Chef, Puppet, Ansible, Microsoft System Center Configuration Manager, and AWS OpsWorks.

As Trend Micro is constantly supporting new operating systems and versions, please refer to the following URL for the complete list, including Windows, Linux, Solaris™, AIX, and Docker containers: [https://cloudone.trendmicro.com/docs/workload-security/system-requirements/](https://cloudone.trendmicro.com/docs/workload-security/system-requirements/)

For software installation, please refer to the Trend Micro™ Deep Security™ Software, which provides similar functionality and is available to install and manage in your own data center or cloud.

Key Benefits

- **Fast**: Start securing workloads in minutes
- **Cost effective**: Annual subscription and usage-based pricing starting at $0.06/hour
- **Simple**: Multiple security controls in a single product
- **Saves time**: We manage and update the product so you can focus on your business
- **Proven**: Protects thousands of customers and millions of servers globally
- **Flexible**: Purchase and procure through AWS and Azure Marketplaces
Workload Security is part of Trend Micro Cloud One™, a security services platform for organizations building in the cloud, which also includes:

- Trend Micro Cloud One™ – Container Security: Image scanning in your build pipeline
- Trend Micro Cloud One™ – Application Security: Security for serverless functions, APIs, and applications
- Trend Micro Cloud One™ – Network Security: Cloud network layer IPS security
- Trend Micro Cloud One™ – Conformity: Cloud security and compliance posture management
- Trend Micro Cloud One™ – Open Source Security by Snyk: Visibility and monitoring of open source risks

KEY CERTIFICATIONS, COMPLIANCE, AND ALLIANCES

- AWS Advanced Technology Partner
- AWS Container Competency Partner
- ISO 27001/ISO 27014/ISO 27017
- PCI DSS
- GDPR
- HP Business Partnership
- Microsoft Certified Partnership
- SOC 2
- Virtualization by VMware
- VMware Cloud on AWS Partner
- VMware Global Partner of the Year
- Microsoft Application Development Gold Partner

TRUSTED EXPERTISE

Trend Micro ranked #1 in IDC’s Worldwide Hybrid Cloud Workload Security Market Shares report
