Enterprise Security

SOLUTIONS OVERVIEW

Constant IT change is the new normal for organizations and businesses; changes that are empowering us with better and more efficient use of their most important asset—information. However, three important trends in today’s evolving IT landscape are also creating some of the most pressing challenges for enterprises:

Cloud and Data Center Modernization: The expansion of virtualized computing, migrations to the cloud (even multi-cloud), containers, and serverless are driving dramatic efficiency and operational gains. But how do you evolve security strategies that ensure performance is not sacrificed and security gaps are not created to fit your modern data center, cloud migrations, cloud-native application development, and cloud operational excellence?

Complex Networks: The enterprise boundary is gone, with networks extending far beyond the traditional LANs and WANs. Wi-fi, remote access, branch offices, and the cloud are giving enterprises more flexibility and productivity. Today there are more points to protect than ever, so how do you evolve your network security to go beyond perimeter defenses and also detect lateral movement within networks?

Consumerization: The explosion of endpoints, the internet of things (IoT) and the industrial internet of things (IIoT) are boosting productivity—giving flexibility and mobility to users like never before, but with the introduction of multiple devices and cloud-based applications such as Dropbox™ and Gmail® at work, how do you rethink traditional defenses?

As technology changes, security has to evolve to keep up with threats. New environments require new ways of thinking about security to ensure their vulnerabilities are identified and that performance is not compromised. Threat actors constantly look for ways to penetrate these new environments, while creating more sophisticated threats.

The Sophistication of Cyber Threats

In the early days, the threat landscape was well-defined—requiring the ability to quickly and efficiently determine the known good and known bad. Classic techniques like anti-malware and content filtering were sufficient to detect and block known bad files, URLs, and spam. These highly efficient techniques remain critical for eliminating the high volume of known bad threats still active today. Since there is an increase in stealthier and more sophisticated unknown threats, the ‘undefined’ areas like targeted attacks, zero-day exploits, ransomware, and business email compromise (BEC) require more advanced threat defense techniques.

While some “next-gen” offerings rely solely on one technique, like behavioral analysis or machine learning, we believe that when it comes to defending your organization against the full range of known and unknown threats, there is no silver bullet. Your enterprise needs trusted solutions that can help solve multiple concerns.
Trend Micro XGen™ security

Trend Micro solutions are powered by XGen™ security, delivering a smart, optimized, and connected threat defense to protect your organization from unseen threats.

**XGen™ security is:**

- **Smart:** Protects against the full range of known and unknown threats using a cross-generational blend of threat defense techniques—including detection and response across email, endpoint, server, cloud workloads, and network—that applies the right technique at the right time, and is powered by global threat intelligence.

- **Optimized:** Delivers security solutions to protect users, networks, and hybrid cloud environments—all designed specifically for, and tightly integrated with, leading platforms and applications, like, Amazon Web Services (AWS), Microsoft® Azure™, Google Cloud™, Microsoft 365®, VMware®, and more.

- **Connected:** Full visibility across email, endpoints, servers, cloud workloads, and networks streamlines detection, investigation, and response while speeding time to protection with automatic sharing of threat intelligence across security layers.

XGen™ security uses proven techniques to quickly identify known good or bad data, freeing advanced techniques to more quickly and accurately identify unknown threats. This core set of techniques powers each of the Trend Micro solutions, in ways that are optimized for each.

**HYBRID CLOUD SECURITY**

Trend Micro hybrid cloud security is driven by Trend Micro Cloud One™, a security services platform for organizations building in the cloud. Delivering the broadest and deepest cloud security offering in one solution, Trend Micro Cloud One enables you to secure your cloud infrastructure with clarity and simplicity, providing an automated, flexible, all-in-one solutions for cloud migration, DevOps, containers, serverless, and data center. Trend Micro Cloud One is optimized for AWS, Microsoft Azure, Google Cloud, and VMware.

Trend Micro Cloud One offers an integrated platform designed for automation, delivering critical capabilities through a broad set of turn-key integrations and APIs.

**“With Trend Micro’s SaaS-based cloud solution, PCI compliance has moved from hours of work to a click of a button. We not only get complete protection, but also time savings for our team.”**

Mario Mendoza, Team Lead, Security Architecture and Business Engagement. Blackbaud
NETWORK DEFENSE

The Trend Micro Network Defense Solution is a family of security products that delivers high performance, flexible, and insightful capabilities for rapidly detecting, analyzing, and responding to targeted attacks and advanced threats.

- **Trend Micro™ TippingPoint™** is a proven wire-speed Next-Generation Intrusion Prevention System (NGIPS) that proactively detects and prevents vulnerability attacks, network exploits, and delivers identity and application awareness to enable contextual visibility and enforcement.

Integrated network-wide breach detection identifies targeted attacks and advanced threats, including proactive threat prevention.

- **Trend Micro™ Deep Discovery™** is an advanced threat protection platform that enables you to detect, analyze, and respond to stealthy, targeted attacks. It uses specialized detection engines, custom sandboxing and global threat intelligence from the Trend Micro™ Smart Protection Network™ to defend against attacks that are invisible to standard security products. Deep Discovery uniquely detects and identifies evasive threats in real time, then provides the in-depth analysis and relevant actionable intelligence that will protect your organization from attack.

  “The security landscape changes so rapidly, visibility is key because you need to understand what is on your network and what is running around so your technical tools can change as rapidly as the environment changes.”

  Larry Biggs, IT Security Engineer, MedImpact

Gartner’s IQ2020 IDPS Market Share for network security equipment worldwide shows Trend Micro is ranked 1st @ 25.3% share

USER PROTECTION

Our interconnected suite of security products lets you protect, detect, and respond to threats targeting your users and their information across endpoint and email no matter where they are or what they are doing.

Core to the suites is endpoint security that infuses high-fidelity machine learning into a blend of threat protection techniques with a single agent to eliminate security gaps across any user activity. With available XDR (detection and response) capabilities that extend beyond the endpoint, you have the ability to better protect your organization from threats.

- **Trend Micro™ Smart Protection Complete** is a software suite that delivers the best protection at multiple layers, supports flexible on-premises, cloud, and hybrid deployment models, and lets you manage users across multiple threat vectors from a single pane of glass with a complete view of your security. Includes endpoint security, mobile security, secure web gateway, email and collaboration security, integrated data loss prevention, and centralized management.

- **Trend Micro™ Smart Protection for Endpoints** is a software suite that protects virtual and physical desktops with multiple layers of threat and data security across devices and applications. Features cloud flexibility and user-centric visibility supported by a full range of endpoint security, integrated data loss prevention, and centralized management.

**XDR: EXTENDED DETECTION AND RESPONSE**

Simplify administration, improve security intelligence, and lower security management costs with an integrated, connected set of security solutions. XDR goes beyond the capabilities of endpoint detection and response (EDR), giving organizations a single console with one source of prioritized, optimized alerts—supported with guided investigation that simplifies getting to a full understanding of the attack path and impact on the organization.

Trend Micro XDR delivers detection, investigation, and response across multiple security layers; email, endpoint, servers, cloud workloads, and network—via a single platform or managed service. Offering complete visibility and expert security analytics.

**SOLUTIONS POWERED BY TECHNOLOGY AND RESEARCH**

**Trend Micro Research**

Our global threat research organization that includes hundreds of internal threat researchers, data scientists and our bug bounty program, The Zero Day Initiative™—provides valuable data informs all of our solutions in order to proactively secure new environments like virtualization, cloud, and containers. Our research doesn’t just provide our solutions with industry knowledge so your organization can react faster, but responsibly discloses new threat information to software and hardware vendors as well as public organizations like the FBI, Interpol, and the United Nations.

**Trend Micro Connected Threat Defense**

This layered approach to security gives you a better way to quickly protect, detect, and respond to new threats that are targeting you, while improving your visibility across your organization at the same time. The Trend Micro™ Smart Protection Network™ leverages global threat intelligence against zero-hour threats to ensure that you are always protected. Using up-to-the-second threat intelligence, the Smart Protection Network is designed to immediately stamp out attacks before they can harm you. Combined with XGen™ security, powering all of our products and services, over 500,000 businesses around the globe are protected each year.

**Support Services**

Trend Micro provides a wide assortment of support services to help ensure that you get the most value from your security investment. Two levels of technical support are available.

- **Standard Support** includes all regular product updates and upgrades, along with highly responsive, expert telephone support during regular business hours, and 24/7 telephone support for critical issues.
- **Premium Support** provides you with a named customer service manager who will be your ongoing contact to assist you with urgent issues and provide expert guidance designed to elevate your security posture.
